

THIS IS AN ARCHIVE OF ALL STRAINS INCLUDING PREVIOUS RELEASES AND NOW UNAVAILABLE STRAINS. PLEASE SEE "CATALOG" FOR CURRENT AVAILABLE STRAINS.

- Strain Name: Fire Headband f2
- Genes: (Fire Diesel X VGH OG Male) IX
- Sativa/Indica: 50/50
- Indoor: Aprox. 9-10 Weeks
- Odor Level: Above Average
- Stretch: 2-3X
- Yield: Above Average

STRAIN DESCRIPTION for MALE: "ChemD"

- Genetics: Indica Dominant Hybrid
- Specifics: Pure Chemdawg D
- Flowering time: 10 weeks
- Sativa/Indica: 70-80% Indica
- Indoor: 10 Weeks
- Odor Level: Average - Above Average
- Stretch: 2x
- Yield: Average

Originally bred by Elite Genetics this is a pure ChemD line. This line has been further stabilized by RD. Like other projects, backcrossed to install all the qualities desirable in the "Elite Clone", in this case ChemD, and then incrossed to stabilize. This highly sought after "clone only elite" in M/F seed form. Pure ChemdawgD genetics. Building on the fine work from Elite this new generation is even closer to the clone only elite, you'll be seriously challenged trying to tell the difference. Extremely high potency, to be used with cation.

Elites Original Description:

These Are Brand New! Just Finished..Very Exciting As These Are 100% Pure Chemdawg D Seeds In True Breeding M/F Seed Form..Super Stable! Chemdawg Extreme Potency/Chem Funk & Major Crystal Production! These May Very Well Be The Best Seeds Ever Made!! Guaranteed The Real Deal!!

ChemD Male Crosses

- Strain Name: VGH OG f2
 - Genes: (Tahoe OG Cut X ChemD Male) IX
 - Sativa/Indica: 55%-60% Indica
 - Indoor: Aprox. 8-10 Weeks
 - Odor Level: Average - Above Average
 - Stretch: 2-3x
 - Yield: Average - Above Average
-
- Strain Name: 4D (4th Dimension)
 - Genes: Chem #4 Clone X ChemD Male
 - Sativa/Indica: 60+% Indica
 - Indoor: Aprox. 8-10 Weeks
 - Odor Level: Average - Above average
 - Stretch: 2x
 - Yield: Average - Above Average
-
- Strain Name: DawgTown Daze
 - Genes: Original (Pure) Haze X ChemD Male
 - Sativa/Indica: 90%+ Sativa
 - Indoor: Aprox. 10-12 Weeks Some Phenos up to 16 Weeks
 - Odor Level: Below Average
 - Stretch: 3-4x
 - Yield: Above Average
-
- Strain Name: Triple Platinum (Replacement for Platinum Dawg)
 - Genes: Double Platinum X ChemD Male

- Sativa/Indica: 75% Indica
 - Indoor: Aprox. 9-10 Weeks
 - Odor Level: Average
 - Stretch: 2-2.5X
 - Yield: Average - Above Average
-
- Strain Name: Southr'n D'Lights
 - Genes: Northern Lights #5 X ChemD Male
 - Sativa/Indica: 70+% Indica
 - Indoor: Aprox. 8-10 Weeks
 - Odor Level: Average - Below Average
 - Stretch: 1.5-2x
 - Yield: Average
-
- Strain Name: SoCal Lemon Diesel
 - Genes: G-13/Lemon Diesel X ChemD Male
 - Sativa/Indica: 75-80% Indica
 - Indoor: Aprox. 9-10 Weeks
 - Odor Level: Average
 - Stretch: 2-3x
 - Yield: Average - Above Average
-
- Strain Name: SoCal Original Diesel
 - Genes: Original Diesel X ChemD Male
 - Sativa/Indica: 70-75% Indica
 - Indoor: Aprox. 10 Weeks
 - Odor Level: Above Average
 - Stretch: 2-3x
 - Yield: Above average
-
- Strain Name: SoCal White Lightening
 - Genes: The White X ChemD Male
 - Sativa/Indica: 80% Indica
 - Indoor: Aprox. 8-9 Weeks
 - Odor Level: Average
 - Stretch: 2x
 - Yield: Average - Above Average
-
- Strain Name: Da Chedda
 - Genes: Cheese X ChemD Male
 - Sativa/Indica: 40-50% Indica
 - Indoor: Aprox. 10-11 Weeks
 - Odor Level: Above Average
 - Stretch: 2-3x
 - Yield: Average - Above Average
-
- Strain Name: Dawg-Goo
 - Genes: Afghoey X ChemD Male
 - Sativa/Indica: 70-80% Indica
 - Indoor: Aprox. 8-10 Weeks
 - Odor Level: Average
 - Stretch: 2x
 - Yield: Average
-
- Strain Name: SoCal Dawg
 - Genes: ChemD Clone X ChemD Male
 - Sativa/Indica: 60+% Indica
 - Indoor: Aprox. 8-10 Weeks
 - Odor Level: Average - Above Average
 - Stretch: 2x

- Yield: Average
- Strain Name: SoCal Giesel
- Genes: Massachusetts Super Skunk X ChemD Male
- Sativa/Indica: 60+% Indica
- Indoor: Aprox. 8-10 Weeks
- Odor Level: Average
- Stretch: 2x
- Yield: Average - Above Average
- Strain Name: West L.A. Fadeaway
- Genes: Casey Jones (Joes Cut) X ChemD Male
- Sativa/Indica: 40-50% Indica
- Indoor: Aprox. 10-11 Weeks
- Odor Level: Average
- Stretch: 2-3x
- Yield: Above average

STRAIN DESCRIPTION for MALE: "A Taste of Arcata"

- Genetics: e-32 (IX 6 BX2)
- Sativa/Indica: Mostly Sativa with a pure Sativa effect, 90% + Sativa growth traits
- Indoor/Greenhouse: 10-11 Weeks approximately, about 75-80 Days. Breed for indoor but will do well outdoors.
- Outdoor Finish: Late October-Early November, 35 degrees latitude and South.
- Odor Level: Medium
- Mite Resistance: High
- Mould Resistance: High
- Stretch: 3x+ but designed for indoors
- Yield: High / needs training
- Potency/Effect: Extremely Potent. Can be heart pounding and speedy/racy. Very sativa in the effect.

Derived from the e-32 Arcata Trainwreck, pure California heirloom genetics, "A Taste of Arcata". We have backcrossed to the e-32 cut then incrossed creating the purest Trainwreck seed line offered anywhere. Choosing only the most desirable of parents from the initial backcrossed we then fine tuned the qualities we found most desirable and further stabilized the line. Backcrossing to get the desirable e-32 characteristics deeply embedded in the genetic pool incrossing to work on getting a stronger main stock to hold the massive weight of those dense colas. Keeping potency at or above the levels of the original e-32 was always a priority and it will show in the final product.

With A Taste of Arcata you will experience wonderful deep flavors of minty, musty, piney, lemon/lime, sickly sweet and sour dank with sharp undertones of citrus fruits. A bouquet to delight the palate and stimulate the senses. "A Taste of Arcata" is true California Heirloom genetics derived from the e-32 Arcata cut.

AToA (Trainwreck) Male Crosses

- Strain Name: American Beauty
- Genes: Casey Jones (Joes Cut) X AToA (Trainwreck)
- Sativa/Indica: 70-80% Sativa
- Indoor: Aprox. 10-12 Weeks
- Odor Level: Average
- Stretch: 2-3x
- Yield: Above Average
- Strain Name: California Dream'n
- Genes: BlueDream Skunk X AToA (Trainwreck)
- Sativa/Indica: 80+% Sativa
- Indoor: Aprox. 10-12 Weeks
- Odor Level: Average - Below Average
- Stretch: 2-3x
- Yield: Average - Above Average
- Strain Name: 707 Cherry Bomb
- Genes: Cherry Pezz X AToA (Trainwreck)

- Sativa/Indica: 60+% Indica
 - Indoor: Aprox. 8-10 Weeks
 - Odor Level: Average - Below Average
 - Stretch: Up to 2x
 - Yield: Average - Above Average
- Strain Name: Pure e-32 (e-32 IX6 BX3)
 - Genes: e-32 Trainwreck X AToA (Trainwreck)
 - Sativa/Indica: 80+% Sativa
 - Indoor: Aprox. 10-12 Weeks
 - Odor Level: Average
 - Stretch: 2-3x
 - Yield: Average
- Strain Name: EPIK PURPLE
 - Genes: SR-71 PK X AToA (Trainwreck)
 - Sativa/Indica: 50-60% Indica
 - Indoor: Aprox. 9-11 Weeks
 - Odor Level: Average - Below Average
 - Stretch: 2-3x
 - Yield: Average
- Strain Name: Humboldt Fogg
 - Genes: Cheese X AToA (Trainwreck)
 - Sativa/Indica: 80% Sativa
 - Indoor: Aprox. 10-12 Weeks
 - Odor Level: Above Average
 - Stretch: 2-3x
 - Yield: Average
- Strain Name: The Jack
 - Genes: Jack Herer/Skunk1 X AToA (Trainwreck)
 - Sativa/Indica: 80+% Sativa
 - Indoor: Aprox. 10-12 Weeks
 - Odor Level: Average - Below Average
 - Stretch: 2-3x
 - Yield: Average
- Strain Name: Santa Monica XIII (SM13)
 - Genes: Airborne G-13 X AToA (Trainwreck)
 - Sativa/Indica: 50-60% Indica
 - Indoor: Aprox. 8-10 Weeks
 - Odor Level: Below Average
 - Stretch: 2-3x
 - Yield: Average
- Strain Name: Super Wreck
 - Genes: Massachusetts Super Skunk X AToA (Trainwreck)
 - Sativa/Indica: 60-70% Sativa
 - Indoor: Aprox. 8-10 Weeks
 - Odor Level: Average
 - Stretch: 2x
 - Yield: Average - Above Average

STRAIN DESCRIPTION for MALE: "Dirty Dawg"

- Genetics: (ChemD/Afghani #1) IX
- Sativa/Indica: 80+% Indica
- Indoor: 9-10 Weeks
- Odor Level: Average - Above Average
- Stretch: 2x

- Yield: Average - Above Average

The name really describes the parents well. The ChemD dirtied up with the earthiness of the Afghani. Expect a more Indica version of the ChemD. The growth pattern reminds me of an OG clone, similar scent too. As expected, oozing with resin. Dirty Dawg retains the potency of the ChemD with a little more of the sedative "stoney" traits of the Afi.

DirtyDawg Male Crosses

- Strain Name: Hair of the Dawg
 - Genes: AToA (Trainwreck) X Dirty Dawg Male
 - Sativa/Indica: 60-70% Sativa
 - Indoor: Approx. 10-11 Weeks
 - Odor Level: Average - Above Average
 - Stretch: 3x
 - Yield: Average - Above Average
-
- Strain Name: California Karma
 - Breeder: California Cannetics
 - Genes: Karmas Medical Cross X Dirty Dawg Male
 - Sativa/Indica: 55-65% Indica
 - Indoor: Approx. 8-9 Weeks
 - Odor Level: Average
 - Stretch: 2x
 - Yield: Average
-
- Strain Name: Southr'n Comfort
 - Genes: Massachusetts Super Skunk X Dirty Dawg
 - Sativa/Indica: 70-80% Indica
 - Indoor: Approx. 8-9 Weeks.
 - Odor Level: Average - Above Average
 - Stretch: 2-3X
 - Yield: Above Average
-
- Strain Name: DawgTown Kush
 - Genes: SoCal Master Cut X Dirty Dawg Male
 - Sativa/Indica: 80-90% Indica
 - Indoor: Approx. 8-9 Weeks. Recommended 2 week longer veg.
 - Odor Level: Below Average - Average
 - Stretch: 1.5x
 - Yield: Average - Above Average
-
- Strain Name: Electric Banana
 - Genes: Banana X Dirty Dawg Male
 - Sativa/Indica: 60% Indica
 - Indoor: Approx. 8-10 Weeks
 - Odor Level: Average
 - Stretch: 2X
 - Yield: Average - Above Average
-
- Strain Name: Hard Lemon V2
 - Genes: Sour Lemon Larry X Dirty Dawg
 - Sativa/Indica: 70-80% Indica
 - Indoor: Approx. 8-9 Weeks.
 - Odor Level: Average - Above Average
 - Stretch: 2
 - Yield: Average
-
- Strain Name: Platinum Dawg
 - Genes: Double Platinum X Dirty Dawg Male
 - Sativa/Indica: 80% Indica
 - Indoor: Approx. 8-9 Weeks
 - Odor Level: Average

- Stretch: 2X
 - Yield: Average - Above Average
- Strain Name: Sonoma Black Dawg
 - Genes: Sonoma Black Kush X Dirty Dawg
 - Sativa/Indica: 80-90% Indica
 - Indoor: Aprox. 8-9 Weeks.
 - Odor Level: Average
 - Stretch: 2X
 - Yield: Average
- Strain Name: Spicy Thai
 - Genes: Pineapple Thai X Dirty Dawg Male
 - Sativa/Indica: 30%-40% Indica
 - Indoor: Aprox. 9-11 Weeks
 - Odor Level: Above Average
 - Stretch: 3X
 - Yield: Average

PRE-2011 RELEASES

- Strain Name: Fire Headband
 - Genes: Fire Diesel (Our Sour Diesel) X VGH OG Male
 - Sativa/Indica: 60% Sativa
 - Indoor: Approx. 8-10 Weeks Aprox
 - Odor Level: Above Average
 - Stretch: 2X
 - Yield: Average
- Strain Name: Double Platinum
 - Genetics: Platinum Bubba Elite Clone x Elites Twisted Purple OGK
 - Sativa/Indica: 80% Indica
 - Indoor: 8-9 Weeks
 - Odor Level: Average - Above Average
 - Stretch: 2x
 - Yield: Average - Above Average

The mother of this cross, Platinum Bubba, is a cross of OG and Bubba and is one powerful stinky girl. The goal here was to retain or exceed the quality, odor and taste of the original Platinum Bubba cut. Well, exceed we did by crossing her to a TPOGK male which increased the potency while also enhancing the fantastic taste and odor of the original Platinum Bubba cut. A mostly indica hybrid with a good indica stone while also providing a psychedelic high to the effect. Recommended as night time herb and for pain relief, sleep deprivation and to stimulate appetite.

- Strain Name: "Hard Lemon" (V1)
- Genetics: Lemon Larry Cut X Dirty Dawg Male
- Sativa/Indica: 70-80% Indica
- Indoor: 8-9 Weeks
- Odor Level: Average - Above Average
- Stretch: 2x
- Yield: Average - Above Average

Not much to say here. OG crossed to the ChemD hybrid Dirty Dawg, expect the utmost dank. The goals here were to create a hybrid with a reduced stretch and better yield than a pure OG while increasing potency. We impressed ourselves with this one. Leaning much more on the Indica side of things, fatter colas and closer internodes will be recognized in this hybrid with an overall shorter, stockier plant. Surpassing the fantastic qualities of the high expected from an OG cross. You can expect extremely high potency and a higher yield than a pure OG. This cross produced in limited quantities and will not be reproduced again.

- Strain Name: "California KARMA"
- Genetics: The Karma's secret recipe X ChemD/Afghani #1 f1
- Sativa/Indica: 65-70% Indica
- Indoor: 9-10 Weeks
- Odor Level: Average to above average

- Stretch: 2x
- Yield: Average

A few years back we were gifted some special beans from a local collective "The Karma Collective" manager named Aviv. Knowing we were in the seed business they were hoping we could carry on or incorporate the wonderful genetics they felt these seeds possessed. The beans were extremely healthy looking but had no name. Described as "Almost Chemdawg" they immediately caught our interest so we kept them to grow out and see what these special beans had to offer. Well, to our surprise they produced some amazing flower and beautiful plants well suited for indoors. Not quite Chemdawg, not very close at all really, but definitely something special with high medicinal value. Leaning a bit more on the Sativa side this well balanced hybrid possessed sweet tones from it's Sativa ancestors and dank earthy undertones from it's Indica genetic background. Not a real heavy stone but a psychedelic, feel good and social high. You could smoke this herb all day and all night with it's amazing "no ceiling" quality. Having very useful medicinal qualities we wanted to carry on these traits with a few enhancements added. Crossing this hybrid to the "Dirty Dawg" male gives a little shorter plant with closer internodes, a bit tighter and heavier flower. While retaining the traits we appreciated, such as the high quality medical value, it's "no ceiling high" and designed for indoors we incorporated the potency of an Indica stone and created a denser higher yielding flower. As a dedication to Aviv and "The Karma Collective" (no longer in business) we are naming this strain after the collective.

- Strain Name: "Purple Suicide" G1
- Genetics: BOG Sour Bubble x Elites Twisted Purple OGK
- Sativa/Indica: 70% Indica
- Indoor: 9+/- Weeks
- Odor Level: Average
- Stretch: 2x
- Yield: Average

This 4-way pollyhybrid is all about elite purple strains. BOG SourBubble in a beautiful easy to grow indica dominant plant. Good resin production and resistance to mites too. While quite strong, the cerebral stone needed help in the indica category so we had a perfect male to take this to the next level of medicinal quality. BOG SourBubble purple pheno was a perfect choice for the TPOGK father. This mix of purple genetics exceeded our expectations. This is the first step in a breeding plan to produce a superior quality purple strain. This cross produced in limited quantities and may not be reproduced again.

- Strain Name: "Old School Kush"
- Genetics: Afghani X Hindu Kush f1
- Sativa/Indica: 100% Afganica
- Indoor: Approx, 7 Weeks
- Odor Level: Average to below average
- Stretch: 1.5x at most
- Yield: Average - Above Average

"Old School Afghani meets Old School Hindu Kush". Combining 2 vintage kush's to make the "Old School Kush". We've crossed two classic Afghanica varieties and have developed a true 100% pure kush f1 hybrid. An absolute must for the kush connoisseur. The Hindu Kush father has a "columnar" style growth pattern with "satellite" side branches. This line of Hindu Kush is heavy resin producing, dense colas variety with a very classic kush smell. Known for it's wide fan leaves with overlapping leaf blade, as wide as they are long. A very short stocky plant that does not really stretch in flower. The Afghani mother was a short, super heavy resin producing plant with a sweet woody scent and taste, producing a heavy narcotic stone. Smooth, pleasant and intoxicating. Almost drugging in effect.
